ISSMGE et ses Technical Committees

The mission of the TCs is to provide a forum for active participation by the individual members of the ISSMGE, and to promote the objectives, activities and results of the TCs throughout the ISSMGE membership. The TCs are a forum for discussing, developing and applying specialist geotechnical knowledge related to the behaviour of geo-materials, geotechnical engineering and engineering.

- **Objective 1:** Disseminate and develop knowledge and practice within the TC’s subject area to the membership of the ISSMGE.
- **Objective 2:** Establish guidelines and technical recommendations within the TC’s subject area.
- **Objective 3:** Assist with technical programs of international and regional conferences organized by the ISSMGE.
- **Objective 4:** Interact with industry and overlapping groups working in areas related to the TC’s specialist area.

ISSMGE et ses Technical Committees

TCs are composed of:
- the Chair, the Secretary and possibly the Vice Chair;
- 2 members appointed by the Member Societies;
- maximum 4 members nominated by the Chair; and
- corresponding members proposed by the Member Societies.

The composition of TCs should hence ensure a mix of academics, researchers and practitioners on the committee appropriate to the subject area of the TC.

As a guideline, **practitioner involvement should preferably exceed 25%** on any TC, increasing to 50% or more in the case of TC of a mainly practical nature.

The main topics addressed by TC204 concern the geotechnical aspects of the analysis, design, construction and maintenance of deep excavations, tunnels and large underground structures, with particular emphasis on the development, effects and control of ground movements, their interaction with existing structures, mitigation measures and risk management.
Objective 1: To disseminate knowledge and practice in the field of underground construction

► At an international level
  ► To prepare the organisation of the 10th Int. Conf. “Geotechnical Aspects of Underground Construction in Soft Ground” in 2017 in Brazil.
  ► To promote a session or a workshop during the next ICSMGE, Seoul 2017.
  ► Develop a database of all proceedings of the previous symposia.
  ► To actively encourage the preparation of papers from TC204 members to be published in refereed journals and in particular for the ISSMGE Int. J. of Geo-Engineering Case histories.
  ► Proposal for the 2nd Fujita lecture 2017 to be held at the TC204 symposium in Brazil.

► At a regional level
  To organise regional workshops on the occasion of large or challenging projects.
  To encourage the active participation (papers, lectures, workshops) of TC204 members at regional conferences.
TC204 - Underground construction in
soft ground

Objectifs – Terms of Reference 2013-2017

Objective 2: To establish guidelines and technical recommendations

► To edit a list of codes and guidelines existing worldwide in the field of geotechnical aspects of tunnelling
► To link in with continuing work on the seismic behaviour of tunnels

Objective 3: Interaction with other TCs and organisations concerned by underground construction

► To cooperate with TC104 “Physical modelling” to extend the guidelines for comparing field or physical model observations with numerical simulations.
► To establish or maintain contact with TCs having close interests such as TC206, TC207, TC305 and TC203.
► To strengthen links with the ITA and investigate future cooperation.

ABSTRACT: Current design practices for urban tunnel construction in soft ground as perceived worldwide are reviewed and discussed. The review is based on answers to a questionnaire prepared and sent out by a TC204 working group in 2010 to practitioners involved in the design or in the design supervision of tunneling projects. The results of this investigation are carefully considered to identify trends and needs for development.

Keywords: urban tunnels, soils, design practice, survey.

1 INTRODUCTION

The first assessment of the design practice involving urban tunnels driven in soft ground (i.e. non-rock) was carried out in 1993 through a survey performed in Brazil. The results from this were published in the 1st International Symposium on Underground Construction in Soft Ground in New Delhi by the former TC28 now TC204 (Negro and Loter, 1995).

In 2006 another Brazilian assessment was made, but this time cut-and-cover structures were not included and the review covered underground openings of any shape with more than 0.5 m diameter; directional drilling was not included. The survey was limited to tunnels built in Brazil but covered any tunnel project conducted with criteria and procedures presently adopted in Brazil. Results from the second assessment were published in the TC28 Shanghai International Symposium (Negro, 2008). TC204 then created a working group to adapt this survey format to review the world design practice.

The present survey focuses on underground openings of any shape with more than 0.5 m diameter and covers tunnel projects conducted all around the world. In all cases tunnels were designed and built in areas with overlying surface buildings and subsurface utilities, both liable to damage induced by ground movements associated with tunnel excavation.

Multiple choice questions to which one or more answers could be selected were sent to professionals involved in the design or in the design supervision of tunnel projects over the past few years. Considering the multi-disciplinary nature of tunnel design, the questionnaire with 46 questions, was sent to practitioners with a variety of expertise and included topics beyond a strict geological content. Accordingly, questions were sent to geotechnical engineers, geologists, structural engineers and experts in numerical modeling.

These professionals could opt not to answer questions outside their fields of specialization. In 57% of the cases the respondents were consultants working on tunneling projects and 1.5% referred to...

The main goal of this technical committee is to contribute to the general practice of those working in a Mega City scenario, to gather and share their experience on foundations, tunnels, excavations, earthquake engineering, slope stability, soft soils, environmental geotechnics, and others.

Mega Cities demand a General Practitioner Geotechnical Engineer and requires the need for gathering and collating previous experience to encourage technical development.
Objective 1: To stimulate interaction between infrastructure geotechnical engineers for mega cities, new capitals and twin (sister) cities

- At an international level
  - To promote a workshop during the 14th Asian Regional Conference, Hong Kong, May 2011;
  - To promote organization of the Twin Cities Geotechnical Seminars (basic planning in annex) in 2012;
  - To promote a session or a workshop during the next ICSMGE, Paris 2013;
  - To encourage and stream the preparation of papers from TC305 members to the ISSMGE International Journal of Geo-Engineering Case histories.

- At a regional level
  - To organise regional workshops at the occasion of large or challenging projects:
  - To encourage the active participation (papers, lectures, workshops) of TC305 members at regional conferences.
TC305 - Geotechnical Infrastructure for Mega Cities and New Capitals

Objectifs – Terms of Reference

Objective 2. To gather and collate geotechnical information
► To set up data and cartographic instrument specification;
► - To establish access to public data;

Objective 3: Interact with other TCs and organisations concerned by Geotechnical Infrastructure for Mega Cities:
► - To establish or maintain contact with TCs having close interests such as TC204 - (Underground Construction in Soft Ground), TC211 - (Ground Improvement), TC212 – (Deep Foundation), TC215 – (Environmental Geotechnics).
► - To cooperate with Deep Foundation Institute during the 4th International Conference on Grouting and Deep Mixing, 15 - 18 February 2012, New Orleans, LA, United States.
TC305 - Geotechnical Infrastructure for Mega Cities and New Capitals

Réalisations

- Workshop “Recent Projects in Megacities and New Capitals” during the 14th Asian Regional Conference on Soil Mechanics and Geotechnical Engineering, held on 23 to 26 May 2011, in Hong Kong, China
- TC204/305 Joint Special Session “Underground Constructions in Megacities”, during the 18th International Conference on Soil Mechanics and Geotechnical Engineering, held on 4 September 2013, in Paris, France
- Local Twin Cities Seminar “Soils of Metropolitan Area of Sao Paulo and Curitiba”, held on 5 and 6 December 2012, in Sao Paulo, Brazil
- Local Twin Cities Seminar “Soils of Metropolitan Area of Sao Paulo and Curitiba”, held on 28 November 2013, in Curitiba, Brazil
- Kazakhstan-USA Joint Geotechnical Seminar June 28 to July 3, 2011 Astana, Kazakhstan;
- Kazakhstan-Taiwanese Geotechnical Joint Seminar 8 September 2011, Astana, Kazakhstan;
- Kazakhstan-Japanese Geotechnical Joint Seminar 22 September 2011, Astana, Kazakhstan;
- Kazakhstan-Korean Geotechnical Joint Seminar 20 to 23 August, 2012 Astana, Kazakhstan;
- Kazakhstan-Singapore Geotechnical Joint Seminar 10 April, 2013, Astana, Kazakhstan;
- Kazakhstan-Estonia Geotechnical Joint Seminar 18 April, 2013 Astana, Kazakhstan;
- Kazakhstan-Japan-Slovakia Geotechnical Joint Seminar 24 November 2013, Astana, Kazakhstan;
TC305 - Geotechnical Infrastructure for Mega Cities and New Capitals

TWIN CITIES GEOTECHNICAL SEMINARS

► Tradition of the Sao Paulo branch of the Brazilian Geotechnical Society (ABMS) to organize, every ten to twenty years, a local seminar to gather summarized geotechnical and geological data related to Sao Paulo City, conditioned mainly by sedimentary Paleocene stiff and dense soils.

► Different contributors are invited to prepare contributions, updating the knowledge on selected topics such as local geology, hydro-geological conditions, strength and deformability of local soils, performance of geotechnical structures as pavements, shallow and deep foundations, natural and cut slopes, supported excavations, tunnels, etc.

► A book is usually edited based on the proceedings of the seminar, under the title “Soils of the City of Sao Paulo”. Published books resulted in noted editorial successes within the local community.

► To increase national coverage and interest on such publication, a second city was invited to participate in the coming local seminar and the choice was Curitiba with geology conditions very similar to Sao Paulo.

• The idea now is to spread out internationally this type of meeting in the proposed format.
The pending action that the next Chair may give priority is the continuity of the Twin Cities Seminars.

The following countries agreed to conduct local seminars:

- Chile (with Santiago and Valparaíso),
- Italy (cities not yet defined, possibly Rome and Torino or Naples),
- China (with Shanghai and Hong Kong),
- Kazakhstan (with Almaty and Astana),
- Russia (with Moscow and St. Petersburg),
- Japan (Tokyo and Osaka)
- Portugal (Lisbon and O Porto).
En guise de conclusion

- 2 Technical committees concernés par les travaux souterrains en site urbain
- Des lieux d’échanges avec les communautés scientifiques et techniques
- Une communauté française représentée mais qui pourrait être plus active
