

Patrick de Buhan graduated from Ecole polytechnique (1971) and Ecole Nationale des Ponts et Chaussées (1976) in Paris, France, before obtaining his Doctorat-ès-Sciences from the University of Pierre et Marie Curie in 1986. He is presently Professor in Structural Mechanics (plasticity and yield design) at Ecole des Ponts ParisTech, and has been for a longtime head of a research group working in the field of micromechanics and structural analysis applied to civil engineering problems.

His main research area concerns the application of homogenization methods and related upscaling techniques to the simulation and design of reinforced geotechnical structures and the development of associated engineering-oriented computational methods. He is co-author of several textbooks and more than 100 scientific papers in international refereed journals.
